Teaching Transportation Integrating Travel-related Lessons Throughout PreK-12 Education

- **STEAM**: Transportation is a life skill and has connections to science, technology, engineering, art and math.
- **Pre K- 12**: There are opportunities to integrate lessons related transportation into all levels of the education system.
- **Win-win-win**: Teaching transportation brings benefits to students and families (independence, jobs), as well as the school system (reduced costs) and the community at large (sustainability, reduced costs).
- **Action**: Engage with your school system on transportation, specifically:
 - Talk to School Board members
 - Engage with school system staff on transportation
 - Support Safe Routes to Schools funding
